SUMMARY

Full-stack product engineer with experience owning and shipping AI-powered products end-to-end, from usability testing to production. Thrives in ambiguous, fast-moving environments and high-ownership roles at the intersection of technology and people.

EDUCATION

Cornell Tech, Cornell University

New York City, NY

MEng in Computer Science, GPA: 3.88

May 2026

Relevant Coursework: Product Studio, Deep Learning, HCI and Design, Algorithms, Fairness in ML

Honors/Awards: Spirit of Cornell Tech Award

The University of Edinburgh

Edinburgh, UK

BSc in Cognitive Science, GPA: 3.85

June 2022

Relevant Coursework: Machine Learning, Software Engineering, Computer Security, Algorithms and Data Structures, Databases, Computer Communications and Networks, Philosophy

Honors/Awards: Highest grade in graduating class

TECHNICAL SKILLS

Coding Languages: TypeScript, Python, Java, Haskell

Frameworks / Libraries: React, React Native, PyTorch, Next.js, Flask, Django, PostgreSQL, AWS SDK

Methodologies: Agile, Scrum, Lean

PROFESSIONAL EXPERIENCE

Serendipity AI, Front-End Developer, London, UK

June 2024—July 2025

AI startup developing technologies to map vast content streams helping businesses discover strategic opportunities and trends

Syntheticdocs: AI Document Automation Platform | React Native, TypeScript (11 months)

- Owned end-to-end frontend development as sole developer, building features from **zero to production release** on Apple App Store, Google Play Store, and web, including custom image cropper, undo/redo canvas functionality, and async LLM polling
- Overhauled async document processing feature, fixing core polling logic and error handling involving both external and internal APIs, resulting in a ~70% reduction in processing failures
- Collaborated with designer and QA tester throughout development lifecycle to deliver intuitive and stable user experience
- Led 8 **usability interviews** across 2 testing cycles, implementing and validating solutions for 5 recurring pain points
- Evolved from supervised developer to sole frontend developer and **product owner**, defining feature requirements and coordinating cross-functional development within 3 months

Forum Intelligence: Enterprise Agentic Browsing App | React Native, TypeScript (2 months)

- Developed real-time form rendering engine that dynamically displays AI-generated form schemas as users type, and owned packaging and deployment as a standalone desktop application using Electron Forge

Theodo UK, Full-Stack Developer, London, UK

March 2023—April 2024

Full-stack software development consultancy specializing in agile web and mobile app development for startup and enterprise clients

- Delivered two full-stack client projects (Django/PostgreSQL + React; AWS/DynamoDB + React Native), implementing RESTful APIs, user authentication (AWS Cognito), role-based access control, async task handling and unit tests
- Led rapid prototyping for European airline, achieving 8X decrease in user FAQ search times through ChatGPT integration
- Bridged design and requirement gaps in **ambiguous contexts** by creating wireframes, user flows, and clear technical requirements to align teams and stakeholders

PROJECTS

Cornell Tech, Startup Studio

January 2026—May 2026

- Leading product and engineering for a 0 to 1 startup helping families navigate high-stakes decisions before a crisis hits; responsible for customer research, solution design, full-stack implementation, and GTM strategy
